

Product data

Features

- Highly miniaturized linear encoder in SMD-format
- Differential inductive sensing principle
- Insensitive to magnetic interference fields
- Robust against oil, water, dust, particles
- Programmable resolution and maximum speed
- Optional with cable, connector and holder

Applications

- Direct drives
- Industrial / laboratory / office automation
- X-Y and rotating stages
- Pick & Place equipment
- High-speed motion control
- Mechatronics applications

Key Specifications

Output format.....	A and B in quadrature
Resolution.....	down to 0.02 μm
Maximum speed	up to 32 m/s
Airgap	up to 0.6 mm
Supply.....	5 V, 10 mA
Temperature	-20 to 100°C

Description

The ID4501L incremental encoder kit consists of an encoder and a linear scale (Fig. 1). The encoder is an integrated circuit in a PCB housing in SMD-format. It provides incremental A and B output signals in quadrature (Fig. 2). The linear scale is a PCB with passive copper strips. The orientation of the encoder is selected in Table 1.

Resolution, maximum speed and airgap

The resolution and the maximum speed of the encoder are user-programmable or can be programmed ex-factory. The resolution depends on a filter setting that limits the maximum speed of the encoder vs. the scale. The resolution also depends on the maximum distance between the encoder and the scale. The resolution and maximum speed for a certain maximum air-gap are selected in Tables 2 and 3.

Scales

Scales with different lengths (Fig. 4) are selected in Table 5. Each scale has a backside adhesive layer and may be mounted on any substrate, using a 0.2 mm high alignment edge for correct positioning in front of the encoder.

Encoder assembly

The encoder can be assembled by reflow soldering on a rigid or flexible PCB. Optimum performances are obtained by following the recommended schematic (Fig. 5) and footprint (Fig. 6). In particular, there should be no copper traces or metal objects behind the encoder up to a distance of 3 mm in order to avoid any influence on the measured position. If this is not possible, a blank copper layer behind the encoder (rear-side of the PCB) may be envisaged and/or a linearization using the on-chip look-up table (LUT).

Encoder holder

The encoder holder **type A** is available (Fig. 7) and can be selected in Table 6. It includes the encoder and the external components according to the recommended schematic (Fig. 5). The encoder holder can be mounted on any substrate using 4 screw holes.

Encoder cable and connector

The encoder on holder can be supplied with a flat cable of pitch 1.27 mm and a connector (Fig. 7). The cable length and the connector type are selected in Tables 7 and 8.

Encoder programming

The Evaluation and Programming Tool (EPT) including an interface board and the ASSIST software is available for the linearization and programming of the encoder.

3D models of encoder, holder and scales

STEP models are available on www.posic.com.

Specifications

Recommended Operating Conditions

Parameter	Symbol	Remark	Min	Typ	Max	Unit
Supply voltage	VDD		4.5	5.0	5.5	V
Operating Temperature	T _A		-20		100	°C
Airgap	Z			0.2		mm
Lateral tolerance scale	ΔY	TPLS01, scale width 3.7 mm			0.2	mm
		TPLS02, scale width 4.4 mm			0.5	mm
Airgap tolerance	ΔZ				0.1	mm

Electrical Characteristics

Electrical characteristics over recommended operating conditions, typical values at VDD = 5.0 V, T_A = 25°C.

Parameter	Symbol	Remark	Min	Typ	Max	Unit
Supply current	I _{DD}	No load	8	10	15	mA
Maximum output frequency	F	A/B output signals	0.8	1	1.2	MHz
High level output voltage*	V _{OH}	I _L = 2 mA	VDD-0.5			V
Low level output voltage*	V _{OL}	I _L = 2 mA			0.5	V
Rise time, fall time	t _r , t _f	C _L = 47 pF			20	ns

If A is pulled up and B pulled down during power-up, the encoder enters into a test mode with a 50 kHz square wave on all outputs.

Encoding Characteristics

Encoding characteristics over recommended operating conditions, typical values at VDD = 5.0 V, T_A = 25°C, airgap = 0.2 mm, speed = max speed/10.

Parameter	Symbol	Remark	Min	Typ	Max	Unit
Pulse width error	ΔP	Nominal value 180°e		10	50	°e
State width error	ΔS	Nominal value 90°e		10	60	°e
Phase shift error	ΔΦ	Nominal value 90°e		10	45	°e

Linearity

For high-resolution high-precision applications, it is possible to linearize the encoder by means of a Look-Up Table (LUT) that is located inside the encoder. The LUT can be programmed in volatile or in non-volatile memory by means of the Evaluation and Programming Tool (EPT) or it can be pre-programmed by POSIC. The LUT option is selected in Table 4.

Fig. 1 Coordinate system XYZ.

Fig. 2 Encoder output signals A and B in quadrature.

Definitions

Airgap	Distance between encoder and scale in Z-direction. See Fig. 1.
Cycle	One A quad B period, see Fig. 2.
CPP	Cycles per scale-period.
°e	Electrical degree (one Cycle is 360°e)
Phase shift Φ	Number of electrical degrees between the center of the high state of channel A and the center of high state of channel B. Nominal 90°e. Fig. 2.
Pulse width P	Number of electrical degrees that an output is high during one cycle. Nominal 180°e. Fig. 2.
State width S	Number of electrical degrees between two neighbouring A and B transitions. Nominal value is 90°e. See Fig. 2.

Technical drawings

Fig. 3 Encoder dimensions (mm) and pin-out. The "Encoder center" must be centered with respect to the scale (see Fig. 4).

Fig. 4 Scales TPLS04-026 (top and middle) and TPLS05-205 (bottom). All dimensions in mm. Period-length is 1.28 mm. Both scales have backside adhesive. Scale thickness includes adhesive, but not the release liner. The special periods at the left and right ends of the scale are intended for another encoder and should not be used with the ID4501.

Fig. 5 Recommended schematic. The supply filter capacitor should be $1 \mu\text{F}$ or more. The capacitors 100 nF and $2 \times 10 \text{ nF}$ should be placed close to the device. Connections A, B and I are required for programming and linearization.

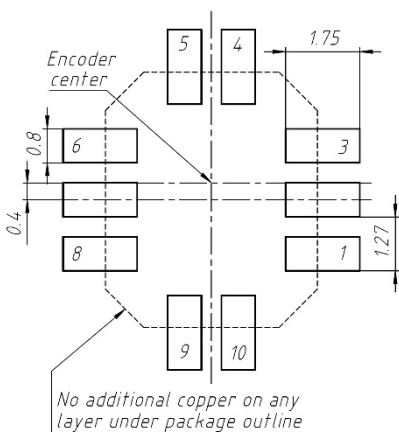

Fig. 6 Recommended footprint.

Fig. 7 Dimensions (mm) and connector pin-out of encoder on holder type A with flat cable (pitch 1.27 mm) and 8-pin DIN41651 connector.

Pin	Name	Description
1	VDD	5V Supply
2	VSS	Ground
3	A	A
4	B	B
5	I	I (multiple)
6	NA	Not A
7	NB	Not B
8	NI	Not I (multiple)

Ordering information

Ordering code: ID4501L-ABBCCD-EEEE-F-GGG-HH

A	Orientation	Table 1
BB	Maximum speed	Table 2
CC	Resolution	Table 3
D	Look-Up Table	Table 4
EEEE	Linear scale	Table 5
F	Encoder holder	Table 6
GGG	Cable	Table 7
HH	Connector	Table 8

Table 1: Orientation. Arrows indicate direction of movement of the scale with rising edge A prior to B.

A	Orientation
0	Not progr.
3	0°
4	90°
5	180°
6	270°

Table 2: Maximum speed

BB	Max speed (m/s)	Maximum value CC
00	Not programmed	
01	0.015	16
02	0.031	16
03	0.062	16
04	0.12	15
05	0.25	14
06	0.5	13
07	1	12
08	2	11
09	4	10
21	8	09
22	16	08
23	32	07

Lower Max speed leads to lower jitter of the A/B outputs.

Table 3: Resolution

CC	Resolution		Maximum value BB	Maximum Airgap* (mm)
	Cycles per Period	µm		
00	Not programmed			
03	2	160	23	0.6
04	4	80	23	0.6
05	8	40	23	0.6
06	16	20	23	0.6
07	32	10	23	0.6

08	64	5	22	0.5
09	128	2.5	21	0.5
10	256	1.25	09	0.4
11	512	0.63	08	0.4
12	1'024	0.31	07	0.3
13	2'048	0.16	06	0.3
14	4'096	0.078	05	0.2
15	8'192	0.039	04	0.2
16	16'384	0.020	03	0.2

* Recommended airgap = 0.2 mm. Sequence of A and B transitions is correct up to Maximum Airgap, but encoding specifications may be out of range.

Table 4: Look-Up Table (LUT)

D	Look-Up Table programmed in OTP
0	Not programmed
1	LUT according to scale, to be specified
8	Custom LUT, to be specified
9	Default LUT (no scale specified)

Table 5: Linear scale (see Fig. 4)

EEEE	Scale	Dimensions
00000	No scale	
04026	TPLS04	L x W x T = 26 x 4.5 x 0.77 mm
05205	TPLS05	L x W x T = 205 x 4.5 x 0.77 mm

Table 6: Encoder holder

F	Encoder holder
0	No holder
A	Holder type A (Fig. 7)

Table 7: Cable

GGG	Cable
000	No cable
0xx	Flat ribbon cable, length xx cm

Table 8: Connector

HH	Connector
00	No connector
04	8-pin connector DIN 41651 (Fig. 7)
