

Product data

Features

- Highly miniaturized encoder
- Differential inductive sensing principle
- Insensitive to magnetic interference fields
- Robust against oil, water, dust, particles
- Ultra-thin encoder and scale (total < 2 mm)
- Optional with cable, connector and holder

Applications

- Linear actuators
- Industrial / laboratory / office automation
- X-Y stages
- Pick & Place assembly equipment
- High-speed motion control
- Mechatronics applications

Key Specifications

Output format.....A and B in quadrature + Index
 Resolution.....down to 0.02 μm
 Maximum speedup to 36 m/s
 Airgapup to 0.6 mm
 Supply.....5 V, 25 mA
 Temperature-40 to 125°C

Description

The IT3402L incremental encoder kit consists of an encoder and a linear scale (Fig. 1). The encoder consists of two integrated circuits in a PCB housing. It provides incremental A and B output signals in quadrature and an Index signal, which is synchronous to A and B (Fig. 2). The linear scale is a PCB with passive copper strips.

Resolution, maximum speed and airgap

The resolution and the maximum speed of the encoder are user-programmable or can be programmed ex-factory. The resolution depends on a filter setting that limits the maximum speed of the encoder vs. the scale. The resolution also depends on the maximum distance between the encoder and the scale. Tables 2 and 3 allow the configuration of resolution and maximum speed for a certain maximum air-gap.

Scales

Scales with different lengths (Fig. 4) are selected in Table 5. Each scale has a backside adhesive layer and may be mounted on any substrate, using a 0.1 - 0.2 mm high alignment edge for correct positioning in front of the encoder.

Encoder holders

Different encoder holder options are available and can be selected in Table 6.

The encoder holder **type A** (Fig. 5) may be mounted on any substrate using 4 screw-holes. It has a strain relief for the cable. Holder type A is for evaluation purposes only.

The encoder holder **type B** (Fig. 3) may be mounted on any substrate. Use half-holes on encoder PCB housing and alignment pins for accurate positioning.

The encoder without holder may be mounted on non-metallic substrates. Use half-holes on encoder housing and alignment pins for accurate positioning.

Encoder cable and connector

The encoder is supplied with a flat cable of pitch 1.27 mm and a connector (Fig. 6). The cable type and length and the connector type are selected in Tables 7 and 8.

Specifications

Recommended Operating Conditions

Parameter	Symbol	Remark	Min	Typ	Max	Unit
Supply voltage	VDD		4.5	5.0	5.5	V
Operating Temperature	T _A		-40		125	°C
Airgap	Z		0.1	0.3	0.6	mm
Lateral tolerance	ΔY				0.1	mm
Airgap tolerance	ΔZ				0.1	mm

Electrical Characteristics

Electrical characteristics over recommended operating conditions, typical values at VDD = 5.0 V, T_A = 25°C.

Parameter	Symbol	Remark	Min	Typ	Max	Unit
Supply current	IDD	No load	16	25	37	mA
Maximum frequency A/B signals	F _{A/B}		0.9	1.2	1.5	MHz
High level output voltage	V _{OH}	I _L = 2 mA	VDD-0.5			V
Low level output voltage	V _{OL}	I _L = 2 mA			0.5	V
Rise time, fall time	t _r , t _f	C _L = 47 pF			20	ns

If A is pulled up and B pulled down during power-up, the encoder enters into a test mode with a 65 kHz square wave on all outputs.

Encoding Characteristics

Encoding characteristics over recommended operating conditions, typical values at VDD = 5.0V, T_A = 25°C, airgap = 0.2mm, speed = 10mm/s.

Parameter	Symbol	Remark	Min	Typ	Max	Unit
Pulse width error	ΔP	Nominal value 180°e		10	50	°e
State width error	ΔS	Nominal value 90°e		10	60	°e
Phase shift error	ΔΦ	Nominal value 90°e		10	45	°e

Linearity

The encoder contains a LUT (LookUp Table) to compensate the periodic non-linearity, which depends on the period-length of the scale, the airgap and the mechanical tolerances. Table 4 allows you to select a standard LUT for POSIC's standard scales, leading to a non-linearity of about +/- 20 μm. Linearization against an accurate reference encoder allows you to reduce the non-linearity to about +/- 10 μm or even better. The LUT can be programmed in volatile or in non-volatile memory by means of the Evaluation and Programming Tool (EPT) or it can be pre-programmed ex-factory. More info on linearization in the EPT User Manual.

Definitions

Airgap	Distance between encoder and scale in Z-direction. See Fig. 1.
Cycle	One A quad B period, see Fig. 2.
CPP	Cycles per scale-period.
°e	Electrical degree (one Cycle is 360°e)
Phase shift Φ	Number of electrical degrees between the center of the high state of channel A and the center of high state of channel B. Nominal 90°e. Fig. 2.
Pulse width P	Number of electrical degrees that an output is high during one cycle. Nominal 180°e. Fig. 2.
State width S	Number of electrical degrees between two neighboring A and B transitions. Nominal value is 90°e. See Fig. 2.
